

Make a Nappy Change **for Good**

Swapping to **reusable nappies** is easy, it can save you money and reduce your impact on the environment...

Reusable nappies are as easy as **1, 2, 3...**

Nappy Change for Good

1. Choose from a range of different fabrics and designs
2. Modern reusables are as reliable as disposables, with no pins or complicated folds
3. Use a waterproof laundry bag or bucket to store and wash your wet nappies. Soaking and high temperature washing is no longer compulsory. Choose a quick drying fabric and line dry to make them even more environmentally friendly. Then you're all ready to go again!

By choosing washable nappies you can reduce your carbon footprint by up to 40% compared to using disposables, and **save money too!**

Nearly 8 million disposable nappies are thrown away each day, that's 3 billion a year. Fossil fuels, trees, water and energy are all used in the production of a single use nappy and when thrown away could take several hundred years to decompose in landfill, where they can also produce methane gas.

Nappy Change for Good is an organisation that works across Bath and North East Somerset, North Somerset and South Gloucestershire to promote the use of washable nappies.

Contact your council to find out about advice, support, trial nappy kits and regular events for residents to see the reusable nappies for themselves.

“ *The thing I love most about washable nappies has to be the money we save! We have two in washables and I never have to worry about running out of them!* ”
