Proportion of suicides that were of people in contact with Avon and Wiltshire Mental Health NHS Partnership (AWP)

Of all the Local Authorities covered by AWP, B&NES had the highest proportion of suicides that were of people in contact with AWP between 2008-12. However, in B&NES the proportion of suicides that were of people in contact with AWP decreased over this period, from 65% to 41%. This is also means that though the B&NES proportion was much higher than the average in 2008-10 (65% compared to 36%), it was only slightly above average in 2010-12 (41% compared to 35%).
